

## 25<sup>th</sup> Anniversary

Here at Kamco we are celebrating 25 years of supplying industrial cleaning products to the heating industry. Originally concentrating on industrial boiler cleaning chemicals we are now recognised as the leading supplier of Power Flushing equipment, having developed the first unit in 1992.

Many thanks to our customers for their support and business over the years. We wish you continued success in these hard economic times and look forward to hearing from you again shortly.

## CombiHeat casing

It is well established that carrying out a power flush with the system water hot gives a more effective result, and it is standard practice to fire the boiler during a power flush.

If the system boiler is disconnected or not functional, then this option is not possible, and therefore Kamco introduced the CombiHeat heating element.

Originally intended as a "drop in" accessory to be used with the CombiMag power flushing filter, many engineers have requested a second clear cylinder and stand, thus enabling both the CombiHeat and CombiMag to be used at the same time.

The additional cylinder and stand (housed in a protective tool box) are £175.00 + vat and carriage.

## Gadgets for an easier life

Pipestoppers are a convenient and great time saving way to cap off the vent and cold feed of a vented system. These adjustable plugs come in 15, 22 & 28mm sizes.

Push the appropriate one into the pipe you need to block or cap off, twist the wing nut a few times, and you have a secure cap capable of handling far more pressure than a power flushing pump can provide, and they're just as easy to remove.

Ask for "Pipestoppers" (Product Code MI030) at £10.95 + vat and postage.

## Engineer's tips

**#1** One of our very popular accessories is the CP2 pump head adaptor, which enables easy connection of your power flushing pump to most system circulator pump bodies.

However some engineers have commented they have experienced difficulty when using it on Wilo based pumps within Vaillant EcoTec boilers, which have a very shallow body.

To combat this we can now supply an optional extra thick O ring. Ask for "CP2 Large O ring" (Product Code MI020) at £9.00 + vat and postage.

**#2** When scrapping old circulator pumps, strip out any re-usable old seals and O rings to help pack out the occasional problem application with your CP2.

## **Kamco overseas**

### **America**

We have recently appointed an American distributor for commercial / industrial descaling pumps, covering both the US and Canada.

Considerable areas of these countries have hard water and as a result suffer from similar problems experienced here in the UK. Although basic equipment is already available, Kamco has been approached to increase expertise and product offering in North America.

Kamco equipment will be on display at a forthcoming nationwide heating and air conditioning exhibition in Orlando, Florida.

### **Pacific**

Despite being an island paradise, the Health Department of Yap, in Micronesia still has a scale problem and has selected a Kamco CF90 Quantum for the job.

The unit will be supplied with a special motor to suit the electrical requirements on the island.

Check out Yap, on Google Earth and you'll find it's one of the remotest places you could find in the Pacific ocean, a possibility maybe, for next years holiday?

### **Gold in the Antarctic**

Whilst we are well known for power flushing pumps and chemicals, Kamco has been manufacturing and supplying diesel fuel anti-waxing additives since its inception.

With global warming, most sales are now exported to the colder parts of the world, such as the Antarctic, and the British Antarctic survey vessel the 'James Clark Ross' regularly takes a consignment of Kamco Waxbreaker GOLD diesel fuel anti-waxing additive as it heads south.

Other customers are in Turkmenistan, Georgia and Armenia, and we regularly supply Waxbreaker to a Land Rover supplier to Afghanistan who

needs to ensure that the vehicles are operational even in the sub

zero temperatures reached at night in some areas, proving that we are wrong in thinking Afghanistan to be too hot, in every way!

However, closer to home, the Snowdon Mountain Railway will be operating throughout the winter thanks to Waxbreaker.
